

### **Integrity Fortified with Data and Records**

High-profile pipeline and energy incidents have caused public concern over asset safety and reliability, placing considerable pressure on operators. As a result, operators must maintain the proper system-wide information to comply with demanding and evolving regulations.

Altamira understands that pipeline and facility data is a key corporate asset and the foundation of informed decision making. We are a national leader in establishing effective data-management systems and assuring the resulting information satisfies both regulatory requirements and operational expectations.

## Asset Integrity

**Altamira asset integrity services minimize risk, ensure compliance, and safeguard your enterprise assets.**

Our mission at Altamira is to solve our clients' most complex regulatory, operational, and business challenges by being the first choice and trusted partner for strategy, consulting, technical expertise, and digital technology solutions. Our experienced team of technical experts, engineers, and consultants develops best work practices that extend the life of critical assets.

The Altamira team assists operators with the growing challenges of ensuring safety and performance throughout the lifecycle of their complex assets, while at the same time satisfying corporate governance, regulatory compliance, and operational expectations. We provide integrated solutions that address the challenges of operating aging infrastructure while optimizing operational and financial performance.

Our client-specific Integrity Management Programs are based on a multi-faceted approach to asset integrity that includes project management, engineering design, integrity analysis, data and records management, compliance solutions, and GIS-based application of integrity services. Each unique program is designed to sustainably deliver safe, compliant, and cost-effective operations. Altamira's team of experts offer an array of asset integrity capabilities designed to enable informed decision making and risk management.
