

ENGINEERING

Engineering expertise and technology solutions to support the entire project lifecycle from feasibility studies through operational management.

Altamira's extensive engineering services rank among the best in the energy sector. Our expert team has decades of experience delivering comprehensive engineering and design packages, along with as-built services, for new expansion, and maintenance capital programs. Engineering projects executed by our experienced staff help assure that an enterprise's assets are optimized from the ground up.

ENGINEERING

Extensive services and essential expertise build a strong foundation for integrity programs with engineering services from Altamira. Whether your organization is expanding assets based on commercial opportunities or performing ongoing maintenance activities, our engineering design team is equipped to support the entire project lifecycle. Our all-encompassing, multi-faceted approach to engineering design includes project management, multi-discipline engineering, integrity analysis, data and records management, compliance solutions, and GIS-based application of engineering and design services.
