

ENGINEERING

Engineering expertise and technology solutions to support the entire project lifecycle from feasibility studies through operational management.

Altamira's extensive engineering services rank among the best in the energy sector. Our expert team has decades of experience delivering comprehensive engineering and design packages, along with as-built services, for new expansion and maintenance capital programs. Engineering projects executed by our experienced staff are designed to ensure that an enterprise's assets are optimized from the ground up.

ENGINEERING EXPERTISE

Whether your organization is expanding assets to capture new commercial opportunities or managing ongoing maintenance programs, our engineering team supports the full project lifecycle. Our integrated, multi-disciplinary approach to engineering design encompasses project management, integrity analysis, compliance solutions, data and records management, GIS-based applications and engineering across multiple disciplines. We leverage a comprehensive suite of technologies throughout the project lifecycle, deploying digital tools and advanced solutions for data capture, design execution, project controls and analytics.

OUR SERVICES:

- As-Built/CADD
- Conceptual Studies/FEED
- Facilities Engineering and Design
- Pipeline Engineering and Design
- Project Management
- Testing and Inspection
